

# UV TECH™

## Surface Protectant and Rejuvenator

Keep your outdoor gear looking great with UV Tech™! UV Tech is an environmentally safe, commercial grade protectant and replasticizer for synthetic materials and natural rubber. UV Tech helps beautify, preserve and restore all kinds of gear including inflatable boats, canoes, kayaks, floatation vests, power and sail boats, windsurfing sails, wet and dry suits, latex seals, B.C.D.s, air hoses, fins, float tubes and more.

- Beautifies
- Preserves and Protects
- Replaces Lost Plasticizers
- Hundreds of Uses

Surfaces such as Hypalon®, PVC, latex, neoprene, polyester, nylon, vinyl and plastic all degrade and become brittle over time. This is caused by the loss of structural oils called plasticizers which evaporate and are abraded away. The loss of these oils is why car dashboards eventually crack. Exposure to sunlight accelerates this process and fades colors.

Unlike other products which mainly give surfaces a greasy shine, UV Tech actually replaces lost plasticizers and helps seal in existing plasticizers. Where other products are merely "top coats", UV Tech penetrates almost instantly, delivering rejuvenating plasticizers into the material.

UV Tech won't rinse off boat surfaces the way other products can, so it won't leave a sheen on water. Surfaces treated with UV Tech have a "like new" luster that doesn't attract dirt.

Depending on sun exposure, even a single coat of UV Tech can benefit the material for several seasons. If an item is subject to heavy UV exposure, apply UV Tech once every 30 to 45 days for maximum protection. Also apply before long term storage.

UV Tech has hundreds of auto and home uses. Use UV Tech on weather stripping, dashboards, vinyl and plastic seats, vinyl and nylon awnings, plastic windows, pool, spa and boat covers, inflatable toys and more. UV Tech: Sunblock for your gear!

Gallon

16oz.

2oz.

8oz.

**Great for river rafts, P.F.D.s and more!**

Before
